# Results of interlaboratory comparison with gaseous reference materials

**Webinar Metrology for indoor air quality**

**Iris de Krom, VSL**

**11 April 2024 – Online**

# Introduction

- VOC gaseous reference materials
  - Production PRM & CRM
  - Analysis
  - Uncertainty
  - Storage and stability
  - Conclusion
  
- Interlaboratory comparison
  - Comparison
  - Results
  - Conclusion

- VOCs from according to EN 16516 (8.2.2.3)
  - *n*-Hexane
  - MIBK (methyl isobutyl keton)
  - Toluene
  - Butyl acetate
  - Cyclohexanone
  - *o*-Xylene
  - Phenol
  - **1,3,5**-trimethylbenzene
  - ~~*n*-Hexadecane~~ (not suitable for preparation of static gas mixtures)
  
- 1,2,3-trimethylbenzene: pure component has low purity (80%)
  - Impurities: 1,3,5-trimethylbenzene, 1,2,4-trimethylbenzene
  - GC-analysis: possible overlap with phenol & bias due to impurities

# Preparation Primary Reference Materials (PRM)

Static gas mixtures (ISO 6142)

Dynamic gas mixtures (ISO 6145)

# Preparation Primary Reference Materials (PRM)

## ➤ Static gas mixture preparation (ISO 6142)

## ➤ Dynamic gas mixture preparation

### ➤ Continuous injection (ISO 6145-4)

## Preparation Calibrated Reference Materials (CRM)

- Dynamic gas mixture preparation
- Sorbent tube sampling → pumped sampling (ISO 16017-1)
  - Tenax TA (TTA)
  - Materials Emissions/Soil Gas Monitoring (ME)
- Nominal mass sampled into tubes was 125 ng per VOC
- Develop and validate analytical method
- Compare static and dynamic gas mixture preparation
- Stability study of CRM

- TD-GC-FID
- DB-1, 30 m long, 0.32 mm internal diameter, 1.00 μm film thickness

# Validation tube sampling & analysis method

- Breakthrough test sorbent tubes
  - TTA → *n*-hexane → 1.9%
  - ME → no breakthrough was observed
- Desorption efficiency test sorbent tubes
  - Full desorption for all components and sorbents
- Precision: repeatability ( $s_r$ ) and reproducibility ( $s_R$ ) → ANOVA calculation
  - TTA sorbent tubes

	<i>n</i> -Hexane	MIBK	Toluene	Butyl acetate	Cyclohexanone	<i>o</i> -Xylene	Phenol	1,3,5-TMB
$s_r$	1.66%	0.97%	0.62%	2.03%	3.43%	0.64%	11.03%	1.17%
$s_R$	2.57%	1.34%	1.16%	2.22%	3.50%	1.26%	14.69%	1.92%

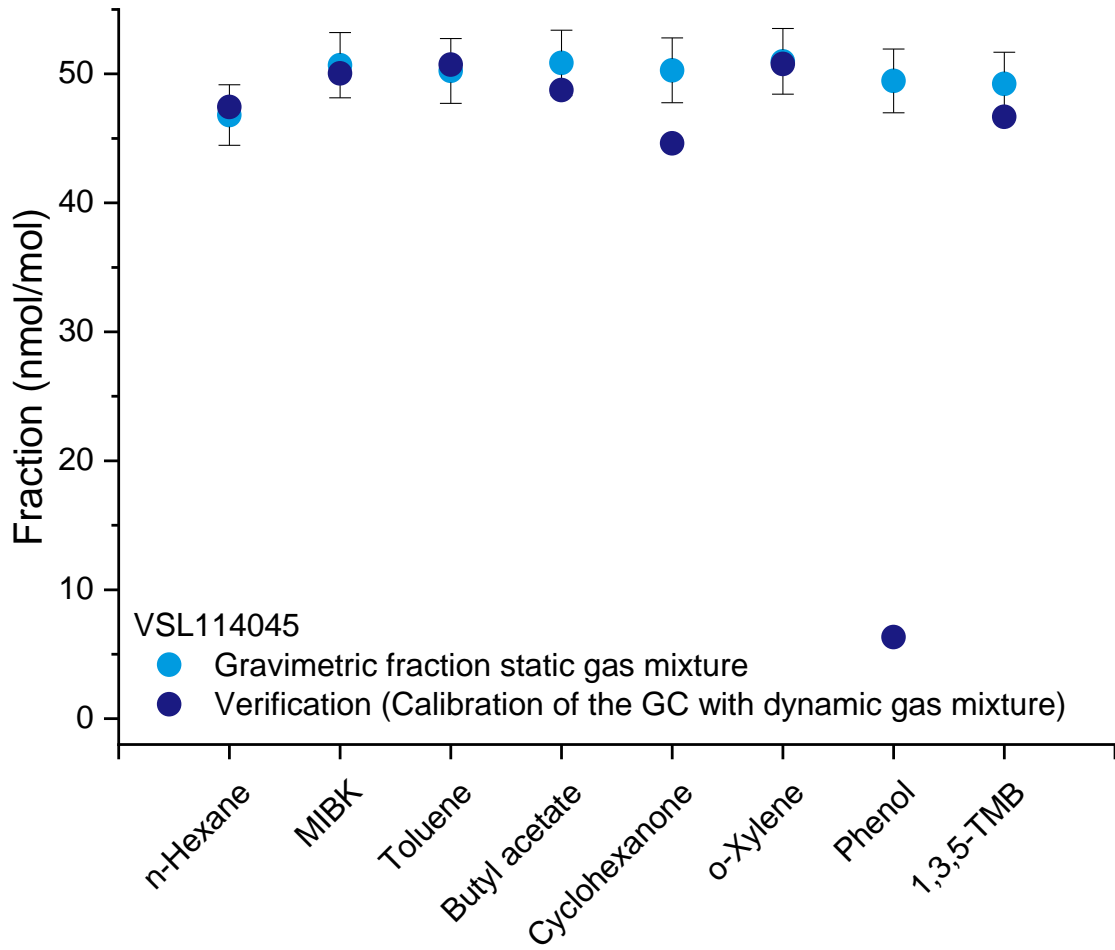

➤ ME sorbent tubes

	<i>n</i> -Hexane	MIBK	Toluene	Butyl acetate	Cyclohexanone	<i>o</i> -Xylene	Phenol	1,3,5-TMB
$s_r$	0.64%	0.74%	0.70%	1.51%	2.51%	0.61%	6.19%	0.51%
$s_R$	1.17%	1.11%	1.24%	1.60%	2.51%	1.12%	9.89%	1.47%

➤ Measurement uncertainty

# Comparison static and dynamic gas mixtures

# Uncertainty static PRM

- Uncertainty sources
  - Preparation and sampling into sorbent tubes → 1% ( $k = 2$ )
  - Calibration GC with the dynamic PRM → 5% ( $k = 2$ )
  - Measurement uncertainty ( $k = 2$ )

VOC	$U_{meas}$ (%)	$U$ (%)
<i>n</i> -hexane	2.4	6
MIBK	2.2	6
Toluene	2.4	6
Butyl acetate	3.2	6
Cyclohexanone	5	7
<i>o</i> -Xylene	2.2	6
Phenol	20	20
1,3,5-TMB	3.0	6

## Storage and stability

- CRM → TTA sorbent tubes
  - Storage
    - Room temperature
    - Fridge
    - Freezer
  - Packaging
    - Regular
    - Dark packing
  - $t = 0, 3, 9, 13, 20$  and 28 days

## Conclusion preparation PRM and CRM

- PRM and CRM developed with selected VOCs from EN16516
  - Phenol decomposes or precipitates in a cylinder.
  - Dynamic gas mixture with phenol can be obtained
- Successful sampling into sorbent tubes
  - Keep in mind the same sampling volume of *n*-hexane when using TTA
  - Used for calibration of GC or other measurement systems
  - Used for interlaboratory comparison
- Uncertainty
  - Dynamic PRM 5 %
  - Static PRM 6 % - 20 %
- Stability CRM tested 1 year
  - 28 days at room temperature in ME and TTA sorbent tubes

- Published
- **D3** [Guideline for the preparation and analysis of gPRMs and gCRMs of indoor air pollutants stated in the EU-LCI list with relative uncertainties below 5 % \( \$k = 2\$ \) and a shelf life of at least 1 year \(zenodo.org\)](#)

## Interlaboratory comparison

### ➤ Goal

- Assess the participants capabilities in sampling and measuring VOCs
  - *n*-Hexane, MIBK, Toluene, Butyl acetate, Cyclohexanone, *o*-Xylene, Phenol, 1,3,5-Trimethylbenzene
- External validation gCRM

### ➤ Workshop

- Participants sample at least 3 tubes with dynamic gas mixture of VOCs in air at VITO
- VSL determined the reference value
- 4 participants

### ➤ Interlaboratory comparison

- VITO sampled 3 participants tubes with dynamic gas mixture
- VSL determined the reference value
- 8 participants

# Homogeneity samples interlaboratory comparison

- Lab 1
  - Tubes were resampled
  - Different reference value
- Lab 3
  - Only participated in the workshop
- Results other labs
  - comparable within the uncertainty of 5 %
- n-Hexane
  - Results to low

## Data processing

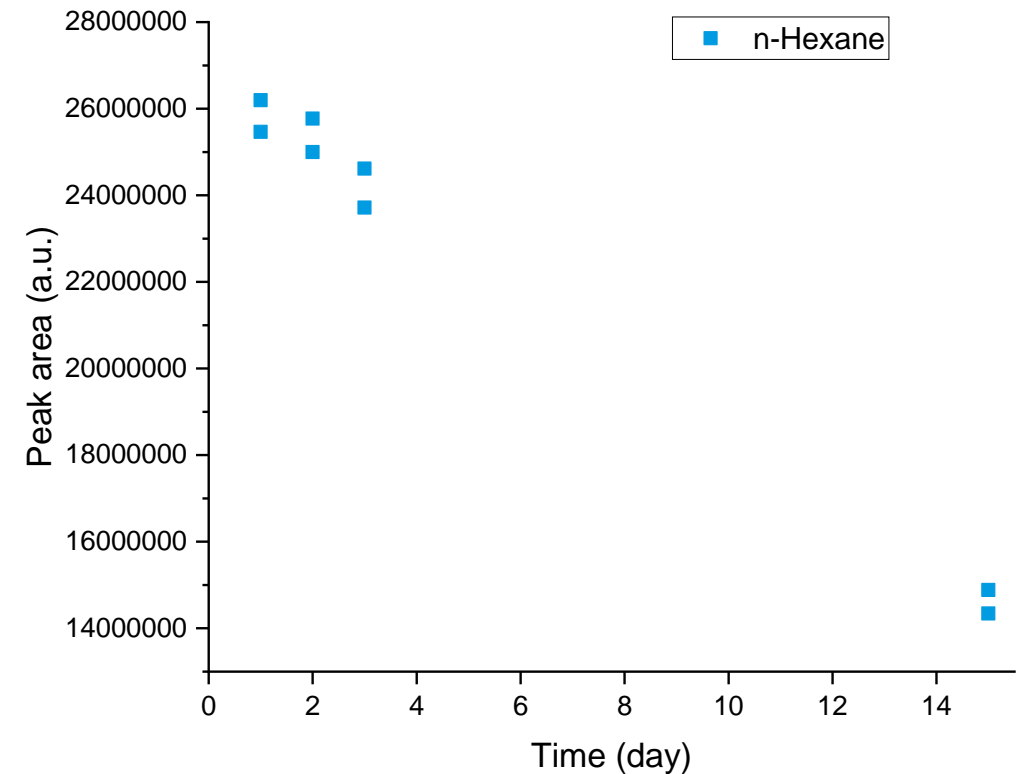

➤ Zeta scores for the assessment of laboratory results according to ISO 13528

$$\zeta_{lab(i)} = \frac{m_{lab(i)} - m_{ref(i)}}{\sqrt{u_{lab(i)}^2 + u_{ref(i)}^2}}$$

➤  $m_{ref(i)}$  → reference value VSL

➤ *n*-Hexane

- Interlaboratory comparison: Consensus value
- Workshop: Reference value

## Workshop

Component	m	u(m)	m <sub>ref</sub>	U(m <sub>ref</sub> )	τ
<i>n</i> -Hexane	122	21	107	5	28
MIBK	134	15	138	7	22
Toluene	124	14	128	6	20
Butyl acetate	84	9	86	4	12
Cyclohexanone	114	8	122	6	0.0
<i>o</i> -Xylene	154	10	162	8	7
Phenol	69	4	99	5	0.0
1,3,5-TMB	131	11	138	7	13

## Interlaboratory comparison

Component	m	u(m)	M <sub>ref</sub> <sup>1</sup>	U(m <sub>ref</sub> )	τ
<i>n</i> -Hexane	98	6	49.5 <sup>2</sup>	2.5 <sup>2</sup>	8
MIBK	99	7	119	6	15
Toluene	97	7	110	5	14
Butyl acetate	101	7	74	4	14
Cyclohexanone	99	8	106	5	17
<i>o</i> -Xylene	107	4	139	7	4
Phenol	26	7	61	3.0	13
1,3,5-TMB	94	6	119	6	9

## Conclusion

- The results highlight the complexity of these measurements
  
- Workshop:
  - Satisfactory results for labs 3, 8 and 9
  - Lab 5 reported biased results for most VOC
  
- Interlaboratory comparison
  - Lab 9 performed satisfactory for all VOCs
  - Labs 1, 4 and 6 perform satisfactory for most VOCs and questionable for a few components
  - Lab 2, 5, 7 and 8 report biased results for most VOCs

- Available in the coming months
  - **D5:** “Summary report on the evaluation of the inter-laboratory comparison performed with the ERM and gCRMs: including information on the repeatability and reproducibility of the data and an evaluation of the major uncertainty sources in sampling, analysis and reporting, according to the EN 16516 test method”.
  - **D6:** “Report on the preparation and measurement uncertainty of ERMs, gPRM and gCRMs”
